Title: 1. What is a configuration?

Subject: lgcmg_doc - Doc/Config

Version: 56

Date: 04/26/24 06:59:30

Table of Content

The configurations	3
1. What is a configuration?	3
2. IPSLCM5	3
3. LMDZOR	3
4. LMDZORINCA	3
5. LMDZREPR	3
6. IPSLCM5CHT	3
7. IPSLCM5CHS	3
8. NEMO	3
9. ORCHIDEE_OL	3

The configurations

Click on the name of any model configuration for more details.

1. What is a configuration?

The IPSL climate modeling suite offers various configurations described in the mod.def file in modipsl/util. Each configuration consists of one or several model components (including the OASIS coupler) and tools. Tools are, for example, libIGCM, XIOS or IOIPSL. The supported configurations use specific versions of each model component. It is however possible to change the version of a model components and the version of the tools. To do so, you must change mod.def.

The supported configurations are maintained and updated by the working groups at the IPSL Climate Modeling Center. See the supported configurations below and click on the links for details.

2. [IPSLCM5](#)

- [IPSLCM5_v5](#) : the reference coupled model used for CMIP5 simulations including atmosphere, land, ocean, sea ice and carbon cycle
- Details on the CMIP5 model and its history (between 2010 and 2012) can be found [here \(pasword required at least\)?](#) and [here for its history.?](#)

3. [LMDZOR](#)

[LMDZOR_v5](#): the atmosphere-land only version

4. [LMDZORINCA](#)

[LMDZORINCA_v5](#): the atmosphere-land version of IPSLCM5 including tropospheric chemistry

5. [LMDZREPR](#)

[LMDZREPR_v5](#): the atmosphere-land version of IPSLCM5 including stratospheric chemistry

6. [IPSLCM5CHT](#)

[IPSLCM5CHT_v5](#): reference coupled model including tropospheric chemistry

7. [IPSLCM5CHS](#)

[IPSLCM5CHS_v5](#): reference coupled model including stratospheric chemistry

8. [NEMO](#)

[NEMO](#): ocean-only version including sea ice and marine biogeochemistry

9. [ORCHIDEE OL](#)

Two configurations [ORCHIDEE OL](#) are available:

- ORCHIDEE SVN AR5: the land version
- ORCHIDEE TAG: the land version using the latest Orchidee reference version
