

Wikiprint Book

Title: 1. Important tools used in the IPSL climate modeling framework

Subject: lgcmg_doc - Doc/Tools/External

Version: 20

Date: 04/26/24 15:45:38

Table of Content

External tools	3
1. Important tools used in the IPSL climate modeling framework	3
1.1. Forge	3
1.2. Remote and secure connections	3
1.3. Shell	3
1.4. Version control	3
1.5. C++ compilers	3
1.6. Fortran compilers	3
1.7. FORTRAN libraries	3
1.8. Generating executables	4
1.9. Batch manager	4
1.10. Mail program	4
1.11. NetCDF tools	4
2. Tools for analyze and visualization of NetCDF files	4
3. A few tips for further reading	4
3.1. Unix	4
3.2. Text editors	4
3.2.1. Emacs	4
3.2.2. vi and vim	4
3.3. Programming and scripting languages	4
3.3.1. Python	4

External tools

1. Important tools used in the IPSL climate modeling framework

The following tools are used for all steps from setup to post processing. They must be available on the [computing machine](#) (except [forge](#)).

The [common](#) account configuration files allow you to access the proper version of the tools (e.g. `module load`).

1.1. Forge

The `forge.ipsl.jussieu.fr` machine is a forge [■trac](#)

- Welcome page of the [User guide](#) as [TracWiki](#) and its attached documents
- Source code archives with the [■svn](#) server
- Problem tracker (tickets)

1.2. Remote and secure connections

- `ssh` and associated commands (`scp`, `rsync`, protocole `svn+ssh`)

1.3. Shell

- `bash` : recommended for interactive mode
- `ksh` : used in batch scripts
- `awk gnu` (`[g]awk`)
- `make gnu` (`[g]make`)

1.4. Version control

- Official website: [■subversion](#)
- Basic command: [svn](#)
- Online subversion manual: [■http://svnbook.red-bean.com/index.en.html](#)

1.5. C++ compilers

1.6. Fortran compilers

To learn how to use Fortran, see e.g.

- Michel Olagnon's Fortran 90 List: [■http://www.ifremer.fr/ditigo/molagnon/fortran90/engfaq.html](#)
- IDRIS training (the latest is available in English only): [■http://www.idris.fr/data/cours/lang/fortran/choix_doc.html](#)

Some Fortran compilers :

- Portland
- Intel
- NAG
- gfortran
- g95

1.7. FORTRAN libraries

- [■NetCDF4 parallel](#)
- [■HDF5 parallel](#)
- MPI/OpenMP

1.8. Generating executables

Default for [compiling](#) the models: [FCM](#).

1.9. Batch manager

- slurm and slurm ccc_*
- torque-maui
- LoadLeveler

1.10. Mail program

- mail[x]

1.11. NetCDF tools

- [Inco](#)
- [cdo](#)

2. Tools for analyze and visualization of NetCDF files

- [ferret](#)
- [NCL](#)
- [ncview](#)
- [IDL](#)
- [SAXO](#)

3. A few tips for further reading

3.1. Unix

Google "Unix Tutorial" is a good starting point.

- Unix introduction
Linux Documentation: <http://www.tldp.org/guides.html>
 - Advanced Bash-Scripting guide. Mendel Cooper : <http://tldp.org/LDP/abs/html/>
 - Bash guide for beginners.Machtelt Garrels <http://tille.garrels.be/training/bash/>
- Portable shell programming : <http://www.gnu.org/software/autoconf/manual/autoconf.html#Portable-Shell>

3.2. Text editors

3.2.1. Emacs

- Official website: <http://www.gnu.org/software/emacs/>

3.2.2. vi and vim

- vim documentation : <http://www.vim.org/docs.php>

3.3. Programming and scripting languages

3.3.1. Python

- Python and CDAT tips: http://www.johnny-lin.com/cdat_tips/
- Python and memory management:
 - problem <http://www.evanjones.ca/python-memory.html>
 - mailing list archive: <http://mail.python.org/pipermail/python-list/>

- model validation tool: <http://motherlode.ucar.edu:8080/thredds/cdmValidate.html>
