Accessibility Support in Trac

Not every user has a graphic environment with a mouse or other pointing device. Some users rely on keyboard, alternative keyboard or voice input to navigate links, activate form controls, etc. In Trac, we work to assure users may interact with devices other than a pointing device.

The keyboard shortcuts must be enabled for a session through the Keyboard Shortcuts preferences panel.

Trac supports accessibility keys for the most common operations.

- on Linux platforms, press any of the keys listed below in combination with the `<Alt>` key
- on a Mac, use the `<ctrl>` key instead
- on Windows, you need to hit `<Shift> + <Alt> + <Key>`. This works for most browsers (Firefox, Chrome, Safari and Internet Explorer)

Global Access Keys

- `1` - WikiStart
- `2` - Timeline
- `3` - Roadmap
- `4` - Search
- `6` - Trac Guide / Documentation
- `7` - New Ticket
- `9` - About Trac
- `0` - This page
- `e` - Edit this page
- `f` - Search
