

Model & Environment functionalities

Table 1 gathers i) model scientific functionalities, ii) model technical features, iii) model environment (forcing data, post processing tools), iv) support material and v) reference simulations that could be used by the whole ORCHIDEE group. It provides for each component (if relevant):

- a key reference,
- the name of the current ORCHIDEE versions that contain the described features,
- the main contact points: 1 or 2 persons to be contacted if you plan to use the component (at least one person should be still ‘active’ in the ORCHIDEE group),
- the list of direct contributors to that component,
- the status of the component which could be: “free to use”, “restricted (contact needed)”, “not available yet”, or any other condition.

Note that to respect a fair use policy, any scientific/technical component should after a certain time or number of publications become “free to use”.

Any user that will benefit from one of these components for a paper, to respect the fair use policy should, depending on the status of the component:

- contact the main responsible for permission of use;
- agree with the main responsible on the level of reward (acknowledgement, co-authorship of one or few contributors,...);
- in case of any conflict the responsible or the user should report to the ORCHIDEE group;
- consider the references that are listed in the table for proper citation of the component.
